- BB1. Now (in this next part of the interview), we would like you to think about development in different countries around the world today. We'll be talking about countries as varied as France and Mongolia. Think of a development scale that rates countries from zero to ten. The least developed places in the world are rated zero and the most developed places in the world are rated ten. You can use both of those numbers for rating countries plus all of the numbers in between.

Using this development scale, where would you put Japan?

[IF R ASKS YOU MAY INFORM: "Zero is least developed; ten is most developed."]

We'll be talking about countries as varied as France and Mongolia. Think of a development scale that rates countries from ten to zero. The most developed places in the world are rated ten and the least developed places in the world are rated zero. You can use both of those numbers for rating countries plus all of the numbers in between.

Using this development scale, where would you put Japan?
